EXPERIENCE

Tracfone, Medley, FL — *Associate Software Developer*

June 2019 - Present

Lead developer for internal dashboard built on Angular 6 and Spring. Upgraded application to support major change in carrier workflow.

Develop solutions for a carrier provision system responsible for over 6 million API calls per day, and 21 million customers.

Migrate legacy monolithic code base into containerized Spring Boot microservices.

Write unit and integration tests for microservices ensuring code coverage meets company standards. Run SonarQube scans to maintain code quality.

Team champion for migration to CICD. Collaborate with DevOps to automate deployments through a Jenkins pipeline.

Maintain technical documentation for team applications and standards on Confluence.

San Services USA, Miami, FL — *Front End Developer*

February 2018 - June 2019

Responsible for maintaining the code base for Sandals Resorts website.

Built reusable UI components using React interacting with REST API's.

Transformed Photoshop Documents into responsive and mobile first web pages using HTML, SASS, and React.

Participated in daily stand-up meetings, working collaboratively with local and international colleagues to complete code sprints on time.

Lead developer on project to book travel agents, resulting in an estimated $700,000 of added revenue.

SKILLS

Javascript, Angular, React, Node, Express, TypeScript, SonarQube, Docker, Java, Spring Boot, Unit Testing, Splunk, HTML, CSS, SCSS, SQL, NoSQL, Git, Agile, OOP, MVC, REST, CICD, Photoshop

ACHIEVEMENTS

Wyncode Academy, Miami, FL— *Full Stack Web Development*

September 2017 - February 2018

Created a full-stack application to improve check-in for events, by automating sign-in using facial recognition.

University of West Florida, Pensacola, FL — *B.S.B.A Marketing*

May 2009 – May 2012

Graduated Cum Laude.

MyCubanStore — *Shipping Notification Automation*

Client was having to manually update shipping order status on their e-commerce platform on a daily basis.

If order status were not updated on time. They received a penalty from Amazon.

Created a Google Cloud Function to automate the process. The function acts as a user and updates shipping every 12 hours via Google Cloud Scheduler.

R.I.M. Real Estate — *Lead Generation Platform*

Client was manually scraping public notices for up to 6 hours a day for new leads. For each new notice they had to compare old notices to prevent duplicate entries in their leads list.

Created an Express and MongoDB backend that fetches from the public notices api every weekday, then seeds the data into a database preventing duplicate leads.

Created a frontend using React to fetch the data and convert the listings into downloadable csv files.
